

Printing from the Sun Workstations

The issue is to avoid printing a large black background that quickly "consumes" the printer's toner.

1. Right click on the Sun Desktop. Select Graphic Tools → The GIMP program.
2. Within GIMP, select File → Acquire → Screen Shot.
3. In the window that pops up click on the Grab button and then click on the image to be acquired.
4. From the acquired image select the portion of the image required, right click and select Edit → Copy.
5. Right click on the image and Select Edit → Paste as New.
6. In the new screen shot generated right click and select Image → Colors → Invert. This command converts the black background to a white background.
7. Again right click and select Image → Colors → Levels and increase the Output Levels to the maximum to make the image bold enough.
8. Now right click and select File → Save As and save the image with JPEG extension.
