“This book provides a single integrated source of information on a multitude of privacy dimensions including technical, human, cultural, personal, and legal aspects.”

- Kuanchin Chen, Western Michigan University, USA

Subject:

IT Security/Ethics; Electronic Commerce;
Electronic Business; Web Technologies;
Human Aspects of Technology

Market:

This essential publication is for all academic and research libraries, as well as all those involved in Web technologies, services, and security. Developers faced with security requirements in the arena of Web services, as well as academics, will find that this book offers a useful balance between academic research and industrial practice. Researchers, practitioners, educators, manager, and students in a full range of IT-related fields and industries will also benefit from this book.

Technology is a double-edged sword that not only brings convenience, but also allows for easier way to collect, explore, and exchange information on or off line. Consumer concerns grow as security breaches and privacy invasions are uncovered ever more frequently, creating the necessity for online consumer protection.

Online Consumer Protection: Theories of Human Relativism presents the academic community with a broad range of international findings in online consumer protection, encapsulating years of expert online privacy research in one comprehensive resource. Designed to offer understanding in the nature of online threats, consumer concerns, and techniques for online privacy protection, this book provides essential and current information for researchers, educators, managers, and practitioners who are affected by the security issues related to consumer interaction with technology.

Excellent addition to your library! Recommend to your acquisitions librarian.
