COLOR SHOCK

Strategy: Color Shock Cluster- Spelling Vocabulary

Appropriate Grade Level: 1st- 4th

Procedures/Steps:

The strategy helps students spell and remember sight words
1. The student will pick out as many colors as there are letters in the given word. The only two colors that are required are green and red.
2. The student will write the first letter of the word in green for go/which indicates that the child should start spelling the word.
3. Next the student will continue to write the each letter with a different color. The last color will be written in red to indicate that the spelling of the word has ended.

Comments and/or tips:
- Link certain colors to words when possible to help the child link the word and the color together.
- Helps students remember words by sight
- Good strategy for individuals with learning disabilities and right brained thinkers
- Promotes students to study clusters of words and how words link to another
- Gives the students a list of meaningful words instead of words
