# Science Memory

**Appropriate Grade Level:** 4th and above

**Procedures/Steps:**

1) Have students pair up and give them stack of cards to be laid face down on the table. Each card is to be paired up with most identical definition or concept. Example: The “components of an atom” card and the “electron, proton, and neutron” card are a good match.

2) Play the game until all the matches are found

**Comments and/or tips:**

- Teacher can design cards contents based on learning phases (Exploration, Term Introduction, Concept Application)
- Exercise is useful for students to learn words and concepts in a game format rather than a drawn out lecture.
